1. In the United States, AIDS = 28 old illnesses and one non-illness:

1983 original AIDS definition (12 illnesses): Pneumocystis carinii pneumonia, Kaposi's sarcoma, toxoplasmosis, strongyloidosis, aspergillosis, cryptococcosis, candidiasis, cryptosporidiosis, cytomegalovirus, herpes simplex, progressive multifocal leukoencephalopathy, lymphoma of the brain

1985 revised definition (seven more old illnesses added): Mycobacterium avium complex, histoplasmosis, isosporiasis, Burkitt's lymphoma, immunoblastic lymphoma, candidiasis of the bronchi, trachea and lungs, and a positive HIV antibody test.

1987 revised definition (six additional illnesses): Encephalopathy, Mycobacterium tuberculosis, wasting syndrome, coccidioidomycosis, cytomegalovirus retinitis, Salmonella septicemia. HIV antibody test no longer required.

1993 revised definition (three more illnesses plus one surrogate marker): Recurrent bacterial pneumonia, invasive cervical cancer, pulmonary tuberculosis, T Cell count of <200 or <14% of total lymphocytes (non-illness).
