

Memorandum

Date • June 7, 1984

From Director
Center for Infectious Diseases

Subject Exchange of AIDS Materials

To Director
Centers for Disease Control

As you requested, a listing is attached of items provided by CDC to NCI and by NCI to CDC from January 1983 to the present. Also attached are copies of all correspondence to and from NCI during this period. Included among the more than 7,000 specimens provided to NCI were sera from 104 transfusion associated AIDS patients in September 1983, 10 in February 1984, and 49 in April 1984.

Walter R. Dowdle, Ph.D.

June 6, 1984

CDC Specimens Sent to Dr. Gallo's Laboratory

January 1983

lymphocytes from 4 Kaposi's Sarcoma (KS) patients
serum from 4 KS patients
lymphocytes from 5 pneumocystosis (PCP) patients
serum from 5 PCP patients (hand carried by Dr. Cabradilla)
serum from 50 Haitian refugees

July 1983

lymphocytes from patient JP 842 - 2nd isolate of HTLV-2 - IV drug user
(hand carried by Dr. Gallo, later by Dr. Popovic)

September 1983

serum from 104 transfusion-associated AIDS patients and their donors
lymphocytes from 7 AIDS patients or "high risk" blood donors
serum from AIDS patient JP 842
lymphocyte culture CT 1114 (hand carried by Dr. Feorino and re-sent on
several different occasions)

January 1984

autopsy material from patient JR 9237364 (lymph node, lung, liver,
spleen) (Oleske)
re-sent same autopsy material from patient JR 9237364
lymphocytes on AIDS patient JR 1736 (blood donor) and AIDS patient
JR 6878 (blood recipient) (hand carried by technician from Gallo lab)
6,920 sera from various U.S. populations (requested by Dr. Blattner
for HTLV studies)

Page 2 - CDC Specimens Sent to Dr. Gallo's Laboratory

February 1984

panel of 205 serum specimens

49 AIDS (homosexual)

50 controls

11 AIDS-associated blood donors

10 AIDS (Haitian refugees)

50 controls (homosexual men)

9 AIDS-associated "high risk" donors

16 AIDS (IV drug users)

10 AIDS (transfusion-associated)

April 1984

serum specimens from 49 blood donors

May 1984

CDC viruses similar to LAV isolated from donor/recipient pair (hand
carried by Drs. Murphy and Curran to Gallo)

Reagents Received from Dr. Gallo's Laboratory

February 1983

goat antibody to HTLV-I p24

monoclonal antibody to HTLV-I p19

May 1984

HTLV-III infected HT cell line
